Artificial intelligence (AI) and robots are becoming increasingly prevalent in our daily social and professional lives. However, they also create new privacy and ethical challenges. The online seminar will be held in collaboration between National Yang Ming Chiao Tung University School of law and The Frontier Research Institute for Interdisciplinary Sciences of Tohoku University in Japan, and invites cross-disciplinary sharing their wonderful research results on robotics-related topics. In addition, the seminar will explore hypothetical questions about robots to engage the audience to get a better understanding of the issue. We will also conduct a round-table discussion on personal information, privacy, and ethics for academic and legislative domains. We look forward to your participation.
