安全で高性能なロケットを目指して

Research and Development of Safe and High-Performance Rocket

Summary

*Language: English

The advancement of rocket technology is a fundamental element supporting space development, and the key challenge lies in balancing safety with high performance. In this presentation, I will first provide an overview of the basic concepts of rocket technology, and then focus on hybrid rocket technology, which is gaining attention and being actively researched worldwide. Additionally, I will introduce my challenges in improving safety and propulsion performance.
