Physics and Sociology on "Negative Effects"

発表者 : TOMA Kenji (Prof.)

当真 賢二 教授

(東北大学学際科学フロンティア研究所 / 先端基礎科学)

Summary

"What good is your research?" Most modern researchers would likely respond to this question by explaining how their work contributes to economic growth or national projects. Modern academic research accelerates technological innovation to meet the expectations of people and nations. However, this also significantly increases negative impacts on people and the natural environment, leading to the emergence of regulations before technologies are released into society. This presentation offers new physical and sociological perspectives on the mechanisms behind these negative impacts and discusses concrete measures to weaken them.
